

D-Cerno L-DECIDE

Voting License for D-Cerno DECIDE

CONFERENCE

Description

The **D-Cerno L-DECIDE license** activates voting and language selection functionalities on the D-Cerno DECIDE unit. Designed for environments that require **structured and democratic decision-making**—such as city councils, local authorities, school boards, educational institutions, and courtrooms—this license enables secure, transparent, and efficient voting processes.

Five Programmable Voting Options

When the license is active*, **up to five digital voting buttons** appear on the unit interface, allowing full flexibility to support any democratic procedure—from simple yes/no voting to complex multi-option polls. Voting behavior is defined in advance via a configurable voting template on the D-Cerno web server. With all available voting options being clearly displayed on the unit interface, participants can cast their votes easily and confidently. And when combined with the D-Cerno Advanced license, **real-time voting results** can be visualized on web-based digital signage, ensuring transparency for all participants.

Chairperson Control

When a D-Cerno DECIDE is configured as a chairperson unit, additional **voting control buttons** become available, allowing chairpersons to start and stop voting sessions independently. This provides greater autonomy and smooth moderation of formal meetings.

Programmable Button and Language Selection**

In addition to voting functions, the D-Cerno L-DECIDE license enables an **extra programmable button** that can be assigned to custom functions such as witness calling in courtrooms, audio routing control, projectors or recording systems. An additional interface button also allows **language selection (Floor + 1 channel)****, enhancing usability in multilingual environments.

Web-Based Configuration and Reporting

Via the D-Cerno web server, technicians can configure **voting templates**, define **seat labels** for voting and speaker lists, and download **voting reports** for official documentation.

When combined with the **D-Cerno Advanced license**, additional features also become available, including **user role management** and **room layout visualization** with clear overviews of seating arrangements and vote distribution for operators and chairpersons.

* One D-Cerno L-DECIDE license per D-Cerno DECIDE unit is required.

** Feature will be added in a future release.

*** Interpretation audio can be provided through Televic's Plixus or Unite solutions, compatible remote interpretation services, or supported third-party interpreter systems.

Features and Benefits

On the D-Cerno DECIDE Unit:

- » 5 voting options
- » Color coded voting buttons
- » Real-time voting results displayed on web-based digital signage
- » Start and stop voting buttons for Chairperson
- » Programmable button for custom function
- » Language selection button: Floor and 1 channel

On the D-Cerno Web Server (Included by Default):

- » Voting template
- » Downloadable voting reports
- » Seat labeling for votes and speaker lists

In Combination with the D-Cerno Advanced License:

- » User roles with Operator, Chairperson and Signage for real-time visualization of voting results
- » Room layout visualization showing seating arrangements and vote distribution
