Confero Language Distribution

CONFERENCE

Description

The **Confero Cloud Platform** is a powerful and modular conference meeting platform that extends the possibilities of a Plixus conference system: prepare your meetings and manage the agendas with **Confero PLAN**, add camera control to your meeting room with **Confero CAM**, and organize and manage hybrid meetings with **Confero MEET**. With a **Plixus Gateway** available in the room, adding extra capabilities is as easy as adding licenses. No additional hardware investment is required!

The **Confero Language Distribution** license allows remote participants to follow the discussions in their own language by easily selecting a translation channel in the Confero MEET interface, directly from their computer's web browser. When the interpreter is not actively translating, Confero MEET automatically switches back to the Floor, so that the participants do not have to manually change the language selection.

> The Confero Language Distribution license allows remote participants using Confero MEET to listen to the discussions in their own language.

No Software Installation

The Confero Language Distribution license integrates into the Confero Cloud Platform. There is no need to install a dedicated software. And whatever OS is running on the participants' computer, they can just connect to Confero MEET in a Chrome or Edge web browser, and use the new feature.

Easy Technical Configuration

Hardware-wise, the Plixus engine (AE-R or MME) is connected to the Lingua ID or Lingua ID-MM interpretation desks via a conference cable on the one hand, and to the Plixus Gateway via an AUX cable on the other hand for transmitting the Floor audio channel.
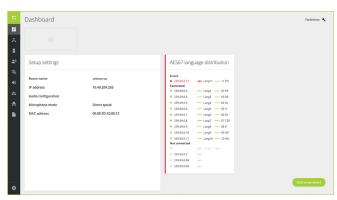

To successiully add interpretation languages into Confero MEET, configure the language channels both in the **Dante Controller** and **Confero** interface. Afterwards, the language channels can be monitored directly from the Technician dashboard in Confero.

Features

- » Remote meeting participants select the language channel directly in the Confero MEET interface (up to 11 languages + Floor are available).
- » Automatic switch to the Floor audio channel when the interpreters stop translating.
- » Language list as configured in the room is also automatically available in the Confero MEET interface.
- » Language channel transmission ensured via AES67 flows from the Plixus central unit (AE-R or MME) to the Plixus Gateway.
- » Monitoring of the AES67 language distribution flows directly on the Technician dashboard in Confero 360, with display of the connection status and errors of the flows.

Confero MEET - Language selection in the interface

Confero - Technician dashboard with the monitoring panel of the AES67 flows

Supported Conference Devices & Software

» Plixus AE-R or MME (CRP 7.11 and higher)
» Confidea F series
» Confidea FLEX series
» uniCOS/uniBOX
» Confidea WAP G4 (in combination with Plixus AE-R or MME)
» Confidea WCAP G3 (in combination with Plixus AE-R or MME)

System Requirements

» Compatible browsers: Google Chrome or Microsoft Edge (latest version)
» Confero MEET license (to be ordered separately)
» Confero PLAN license (to be ordered separately)
» Plixus AE-R or MME with Dante card
» Plixus Gateway
» Lingua ID or Lingua ID-MM

License

Confero Language Distribution is a license for remote meeting participants to select a language channel into the Confero MEET interface. The language channels are available after being configured by a Technician into the Dante Controller and the Confero 360 software.

To unlock the Confero Language Distribution functionality, one of the following licenses is required:

» 71.98.3141 - Confero Language Distribution (1 year)
» 71.98.3142 - Confero Language Distribution (2 years)
» 71.98.3143 - Confero Language Distribution (3 years)
» 71.98.3144 - Confero Language Distribution (4 years)
» 71.98.3145 - Confero Language Distribution (5 years)

All licenses need to be purchases upfront, and include feature updates and basic maintenance.
