

8 Channel Recording License

Plixus license to record up to 8 channels on Plixus AE-R

Description

With the Plixus recording license, you can now record 4 additional channels, resulting in a recording capacity of 8 channels.

Recording meetings has never been easier than with the Plixus AE-R. You can start the recording by pressing the button on the engine or using the built-in web server. The status is visible through an LED next to the recording button. By default, you can record the floor and up to 3 other languages. With the Plixus recording license, you can now record 4 additional channels, resulting in a recording capacity of 8 channels.

With an internal recording capacity of 8 GB, you can record over 100 hours of audio (single-stream, 128 kbps MP3 recording). A USB port quickly expands the available recording memory: plug in and record. Download recorded meetings from the engine's web server with a single click.

Features

- » Up to 8 audio stream recording in MP3 format
- » The internal memory of Plixus AE-R is 8 GB, can be extended using the available USB port
- » Different recording qualities available: 64, 128, 196, 256 kbps

Software

You can configure up to 11 languages and the floor using the Plixus Core web server. For more languages or advanced configuration of the interpreter unit and monitoring, the following standard licenses are required:

CoCon Interpretation
